key words: tourist information website, php and mysql

ABSTRACT :

On Scientific Writing is discussed about the making of the Jakarta Tourism website. This web as a medium to inform the public about tourism objects in Jakarta. Which in turn provide information for ease of getting a more effective and efficient. Web site address information online with this jakarta banget.co.nr created using PHP which is a script for a server-based programming. And to use the MySQL database because it has advantages such as capable of supporting the performance of PHP, is able to accommodate many records, very quickly and efficiently execute the command. In addition, using Dreamwaver 8 as web page design, swish Max is also used as a design an interesting animation on web pages.
